[Inquiry](#)**Manufacturer:** [Texas Instruments, Inc](#)**Package/Case:** SOT23-5**Product Type:** Amplifier ICs**Lifecycle:** NRND**General Description**

The LMV358-N and LMV324-N are low-voltage (2.7 V to 5.5 V) versions of the dual and quad commodity op amps LM358 and LM324 (5 V to 30 V). The LMV321-N is the single channel version. The LMV321-N, LMV358-N, and LMV324-N are the most cost-effective solutions for applications where low-voltage operation, space efficiency, and low price are important. They offer specifications that meet or exceed the familiar LM358 and LM324. The LMV321-N, LMV358-N, and LMV324-N have rail-to-rail output swing capability and the input common-mode voltage range includes ground. They all exhibit excellent speed to power ratio, achieving 1 MHz of bandwidth and 1-V/ μ s slew rate with low supply current.

The LMV321-N is available in the space saving 5-Pin SC70, which is approximately half the size of the 5-Pin SOT23. The small package saves space on PC boards and enables the design of small portable electronic devices. It also allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

The chips are built with Texas Instruments's advanced submicron silicon-gate BiCMOS process. The LMV321-N/LMV358-N/LMV324-N have bipolar input and output stages for improved noise performance and higher output current drive.

Key Features

For V

LMV321-N, LMV358-N, and LMV324-N are available in automotive AEC-Q100 grade 1 and grade 3 versions

Ensured 2.7-V and 5-V performance

No crossover distortion

Industrial temperature range 40°C to +125°C

Gain-bandwidth product 1 MHz

Low supply current

LMV321-N 130 μ A

LMV358-N 210 μ A

LMV324-N 410 μ A

Rail-to-rail output swing at 10 k V

V
